

GLOBAL INSHORE

SPECTRE ROV

The **Spectre** is built off of a **DS4** and is the latest addition to INSHORE's inventory of ROVs. This powerhouse vehicle is designed for depths of 2,000 feet (600 m). Torque-balanced horizontal and "vertrans" thrusters provide excellent maneuverability in four axes, even in adverse conditions.

The **Spectre** accepts a wide range of video cameras in addition to our standard, high-resolution color video camera. A wide, tilting platform for the cameras also includes the lights for uniform illumination. The **Spectre** system also has provisions for additional options such as sonar, manipulators, still cameras, specialized sensors, and custom tooling. The vehicle, thrusters, cameras and accessories are protected by a sturdy, full perimeter stainless steel, tubular frame and all thruster shafts have fail-safe, oil filled, double barrier seals.
