## VideoRay Explorer

The VideoRay Explorer system includes the 8-pound submersible, control box, 40 m (130 ft) of neutral Professional Performance tether, manual, and tool kit. All components fit neatly in two watertight, rolling Pelican cases that fit easily in the trunk of a car or in airline luggage compartments. The entire system is stored in the Pelican cases and weighs less than 43 kg (95 lbs).

The Explorer includes a color camera and a 7 inch LCD color display monitor. An external video monitor and DVD recording device is usually used.
